The Seven Essential Life Skills Every Child Needs

Life Skill That Promotes Executive Function (EF): Making Connections

Making Connections is at the heart of learning—figuring out what's the same and what's different, and sorting these things into categories. Making unusual connections is at the core of creativity. In a world where people can Google for information, it is the people who can see connections who are able to go beyond knowing information to using this information well.

Tip:
As you read It Looked Like Spilt Milk, point to the pictures and ask your child to name the picture:

• “What's that? Is it a squirrel?”

Skill:
When you ask your child to think about what he or she sees, you are helping build connections between words and objects. These connections are important in understanding what the world looks like—a foundation for learning in school and in life.

Tip:
Ask your child:

• “What else could this picture be? I think it could also be a piece of a puzzle. What else do you think it could be?”

Skill:
When you and your child imagine what else the white images could be, you are helping your child learn to make unusual connections, which is the basis of creativity. This back and forth conversation you have with your child is what researchers call “serve and return.” Like a game of ball, one of you says or does something (serves) and the other responds (returns). The importance of these everyday interactions to brain building is a key finding from child development research.

Tip:
You can talk about what other shapes around you look like. This can include shadows, clouds or anything else.

Skill
When you offer your child the chance to see things in different ways, you are helping your child sort and classify information as well as think flexibly, both important aspects of Executive Functions.
